

Lets code: 1

Your first test

\PHPUnit\Framework\TestCase

- a type of assertion
- an expected value
- the value generated by the test
- an optional message to be displayed when the test fails

```
public function testAddition(): void
{
    self::assertSame(
        5,
        \Calculator::add(2, 3),
        'Failed addition',
    );
}
```
